

## Quick Note #4

The pre-work course should have given you a basic understanding of Descriptive Statistics and is a prerequisite for you to be able to appreciate the upcoming material.

If you do not have a background in statistics, then it is highly recommended that you complete pre-work first before proceeding ahead.

### **Important Note:**

It's worth noting that the professor in the video is using Jupyter Notebook, but please don't worry if you're not familiar with it. You can still follow along using **Google Colab**, which provides a similar environment to run Jupyter Notebooks. All the code and examples in the video can be replicated in **Google Colab**, and the user interface will be slightly different but the overall functionality remains the same.

Happy Learning!
